SUMMARY

Backend developer building production APIs in Python with FastAPI and Django REST Framework. Currently shipping features on a live real estate marketplace at Elsoft Limited, with a portfolio of backend systems spanning payment integrations, real-time WebSocket services, and role-based access control. Two years of prior professional frontend work in React and Next.js.

EXPERIENCE

Backend Developer

Elsoft Limited

Jul 2026 – Present

Lagos, Nigeria

- Contribute to Diplace, a production FastAPI codebase powering a real estate and property rental marketplace.
- Designed and shipped a user reporting module (`app/reports/`) with separate report-agent and report-renter endpoints, a dedicated `UserReport` model, and enum-based reason allow-lists constraining input at the schema layer.
- Extended the profile update endpoint to support `profile_picture` and `business_name` fields, including validation and migration handling.
- Work within an established service and repository layer alongside other engineers, following existing patterns for routers, schemas, and dependency injection.

Frontend Developer

Predicare Steun Foundation

Feb 2025 – Jun 2025

Lagos, Nigeria

- Worked directly with backend developers to integrate frontend components against REST APIs.
- Ran quality assurance testing with a focus on diagnosing and resolving performance issues.
- Fixed bugs and resolved technical issues raised by users and team members.

React Developer

Plumpter Ltd

Feb 2023 – May 2023

United Kingdom (Remote)

- Built the web application interface for a home listing agency startup — the same property listing domain worked in today at Diplace.
- Implemented client state management with Redux.
- Delivered remotely across time zones for a UK-based team.

Frontend Developer

Risigner

Aug 2022 – Jan 2024

Lagos, Nigeria

- Developed the full user interface for a fashion e-commerce and innovations company using React and Tailwind CSS.
- Implemented Redux for state management, sharing data and behaviour cleanly across multiple components and pages.
- Longest-running engagement to date — roughly 18 months of sustained delivery.

Frontend Developer (Remote)

Side-Hustle Internship

2022

Nigeria

- Collaborated with a team of developers translating UI designs into responsive static sites using React, Redux, and Tailwind CSS.

Social Media Manager

ZernConsults

Oct 2021 – Apr 2022

Lagos, Nigeria

- Grew audience engagement through a consistent digital content and brand messaging strategy.

PROJECTS

Zella — Fintech wallet API

Django REST Framework, PostgreSQL, Paystack, Celery

- Digital wallet backend modeled on Piggyvest and Kuda: account creation, balance management, transaction history.
- Implemented peer-to-peer transfers using database-level atomic transactions and row locking to prevent double-spend and race conditions under concurrent requests.
- Integrated Paystack deposits with webhook handling, HMAC signature verification, and idempotency keys so replayed events cannot double-credit an account.
- Modeled transactions as an append-only ledger rather than mutable balances, keeping account state reconstructable.

SwiftRide — Ride-hailing backend

Django, Channels, Celery, Redis, GitHub Actions

- Implemented the full ride lifecycle as an explicit state machine (requested → accepted → in progress → completed/cancelled) with guarded transitions.
- Built real-time driver location tracking over WebSockets using Django Channels.
- Offloaded notifications and post-ride processing to Celery background tasks.
- Configured a GitHub Actions CI/CD pipeline running the test suite on every push.
- Integrated Paystack for fare payment and payout flows.

confr — Web conferencing backend

Django Channels, WebSockets, WebRTC, Redis, Docker, Render

- Real-time conferencing backend supporting multi-user video sessions.
- Built a WebSocket signaling layer enabling peer-to-peer WebRTC negotiation, routing offers, answers, and ICE candidates to specific peers rather than broadcasting to the room.
- Implemented JWT authentication at the WebSocket handshake, where standard DRF auth middleware does not apply.
- Added server-enforced host controls: mute, remove participant, lock room, plus real-time presence tracking.
- Containerized with Docker and deployed to Render, working through Redis version conflicts and free-tier migration constraints.

Hotel Management & Billing API

Django REST Framework, Paystack, OnePipe

- Backend managing hotel operations and billing with support for both automated and cash-based payments.
- Built real-time service charge tracking across departments and role-based staff access control.
- Integrated Paystack and OnePipe for reservation confirmation and recurring billing.

Hospital Management System

Django REST Framework, PostgreSQL

- RESTful APIs covering patient management, doctor consultations, prescriptions, pharmacy dispensing, and laboratory orders and results.
- Structured relational models to reflect real clinical workflows rather than convenient abstractions.
- Enforced role-based access control across clinical, pharmacy, and laboratory roles.

SubStacky — Multi-tenant SaaS subscription API

Django REST Framework, Paystack

- Multi-tenant subscription management with tenant-scoped queriesets and role-based permissions.
- Handled Paystack subscription webhooks with HMAC verification and idempotent event processing.
- Modeled plans, subscriptions, and billing cycles with state transitions for upgrade, downgrade, and cancellation.

WallCast — Paint colour visualizer API*FastAPI, SQLAlchemy, image generation API*

- In progress: a service letting users preview paint colours on photographs of their own rooms.
- Built authentication, data models, and the project router on a FastAPI + SQLAlchemy foundation.

StorageDrive — Cloud file management API*Django REST Framework, drf-spectacular*

- Google Drive-style backend for uploading, organizing, and managing files and folders.
- Implemented recursive folder tree traversal and a hierarchical permission system for secure sharing and controlled access.
- Documented the full API surface with drf-spectacular / OpenAPI.

E-commerce API*Django REST Framework*

- Custom user authentication, product inventory, and order management.
- Modeled orders with a many-to-many relationship through an intermediate table, with computed properties for real-time stock availability and order subtotals.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS**Backend:** FastAPI, Django, Django REST Framework, Django Channels, SQLAlchemy, Node.js, Celery, WebSockets, REST API design**Frontend:** React, Next.js, Redux Toolkit, Tailwind CSS**Data:** PostgreSQL, Redis, database transactions and locking, schema migrations**Payments:** Paystack, OnePipe, webhook handling, HMAC signature verification, idempotency**Infrastructure:** Docker, GitHub Actions, Render, Linux, Git**Practices:** JWT authentication, role-based access control, OpenAPI/drf-spectacular documentation, automated testing, CI/CD**EDUCATION**

B.Sc. Pure and Applied Chemistry**Aug 2025***University of Lagos**Akoka, Lagos, Nigeria*

Technical: Harvard CS50 — Introduction to Programming with Python. Certified Front-End Developer, Side-Hustle Internship. Ongoing self-directed study in algorithms, operating systems, networking, and security following an OSSU-based curriculum.
